

10497

*Kjeld Kirk Kristiansen ist der Enkel von Ole Kirk Kristiansen, dem Gründer der LEGO Gruppe. Kjeld führte das Unternehmen, als 1979 die Themenwelt „Space“ vorgestellt wurde.*

## EINE ANMERKUNG VON KJELD

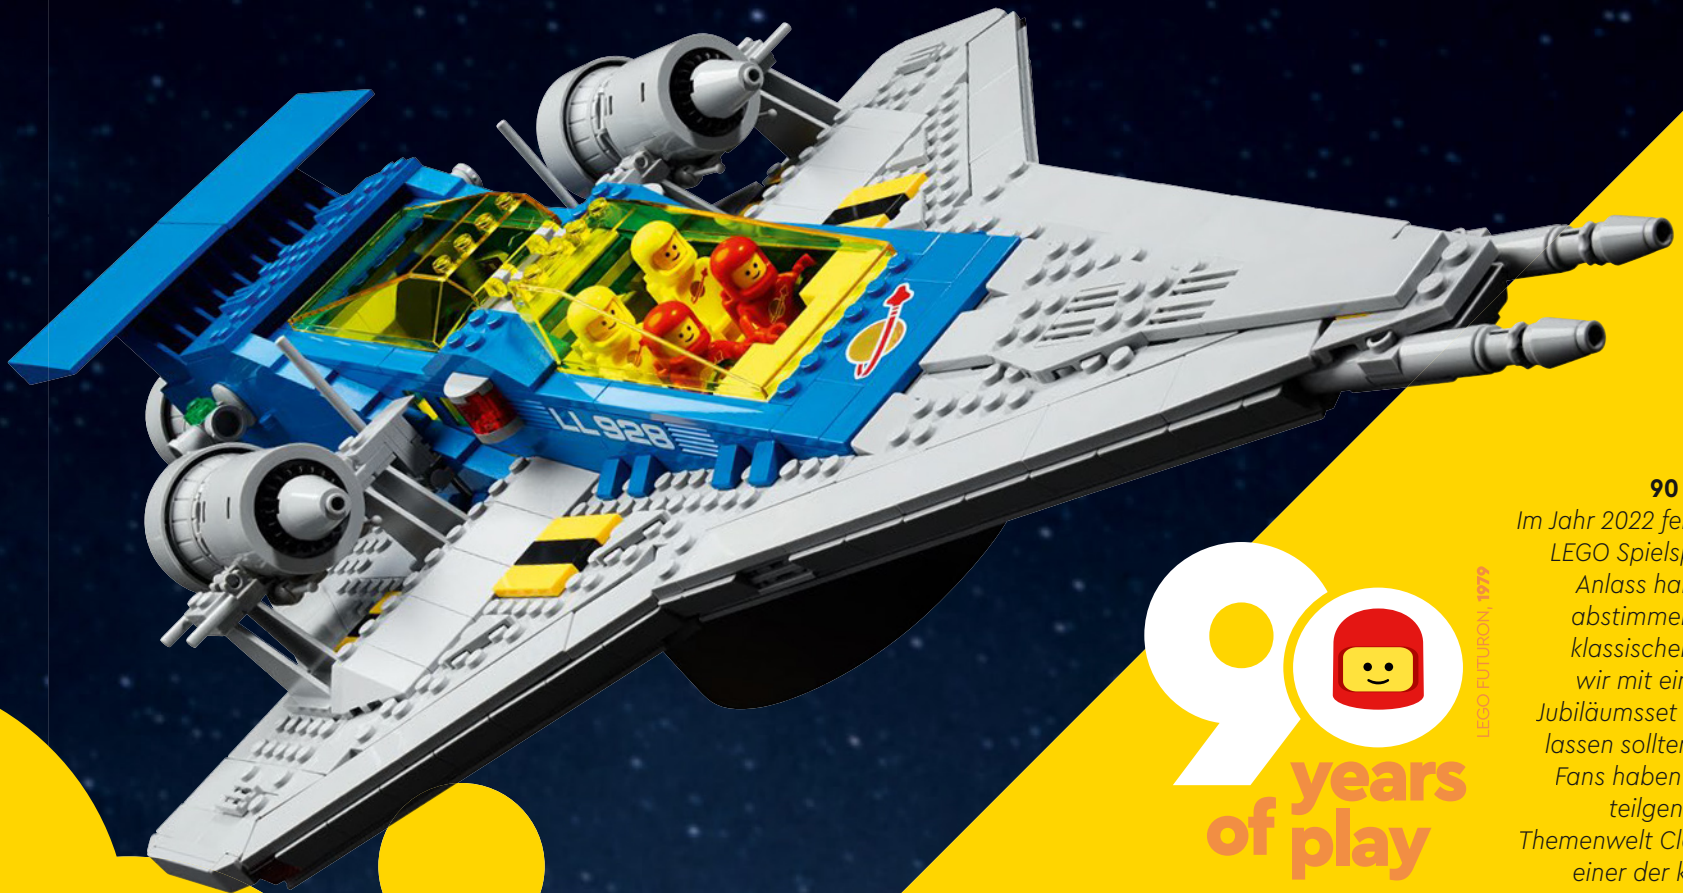

In den späten 1950er-Jahren und in den frühen 1960er-Jahren faszinierte mich der Wettlauf ins All. Deshalb baute ich eine Raketenbasis nach dem Vorbild des US-Raumfahrtzentrums in Cape Canaveral. Als dann 1979 die Galaxy Explorer herauskam, war das Set sofort einer meiner absoluten Favoriten. Mir gefiel vor allem der versteckte Heckladeraum für den Mondbuggy. Das war eine richtig coole, fast schon geheime Funktion. Und dann waren da natürlich auch noch die LEGO® Astronauten! Das Modell zur Feier des 90-jährigen LEGO Jubiläums ruft mir schöne Kindheitsmomente in Erinnerung und bringt die *Galaxy Explorer* ins 21. Jahrhundert.

**Kjeld Kirk Kristiansen**

# NEUINTERPRETATION EINES KLASSIKERS

Zur Feier des 90-jährigen LEGO® Jubiläums haben wir beschlossen, eines der legendärsten LEGO Raumfahrtsets aller Zeiten in einer überarbeiteten Version neu herauszubringen. Wenn man ein sehr beliebtes Modell aus früheren Zeiten neu auflegt, sind sorgfältige Überlegungen erforderlich. Aber wir wollten mit dem *Entdeckerraumschiff* unbedingt eine größere und detailreichere Version der *Galaxy Explorer* erschaffen und gleichzeitig all die magischen Elemente des ursprünglichen Modells würdigen. Hoffentlich bereitet es dir große Freude, diesen neuen LEGO Klassiker zu bauen!

of play

LEGO FUTURION, 1979

## 90 Jahre Spielspaß

Im Jahr 2022 feiern wir 90 Jahre LEGO Spielspaß. Aus diesem Anlass haben wir die Fans abstimmen lassen, welche klassischen Themenwelten wir mit einem besonderen Jubiläumsset wieder aufleben lassen sollten. Zehntausende Fans haben an der Umfrage teilgenommen, und die Themenwelt Classic Space war einer der klaren Gewinner!

Die Sets Space Cruiser (924) und One Man Spaceship (918) hatten ein ähnliches Design, waren allerdings deutlich kleiner als die imposante Galaxy Explorer (928/497).

## DIE REISE INS ALL

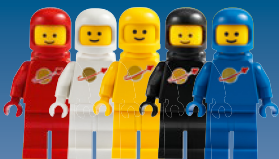

Die LEGO® Raumfahrtsets waren schon immer sehr beliebt. Für viele Fans war ein Raumschiff aus LEGO Steinen die erste Reise in einen Weltraum voller Science-Fiction-Abenteuer.

Die Galaxy Explorer (928/497) kam 1979 heraus. Das legendäre Set beinhaltete ein futuristisches Raumschiff, einen kleinen Mondrover, eine Mondbasis mit Tower und Landeplatz und vor allem 4 Minifiguren in roten und weißen Raumanzügen. Das waren die ersten LEGO Astronauten!

Die Themenwelt, die wir heute als Classic Space kennen, wurde immer größer. Im Lauf des nächsten Jahrzehnts wurden die Raumschiffe immer detailreicher und die Mondbasen, Mondbuggys und Roboter wurden immer komplexer. Schnell folgten Unterthemenwelten wie Futuron (1987), Blacktron (1987) und Space Police (1989). Diese komplexeren Sets ließen sich kombinieren, eröffneten viele neue Handlungsstränge und beinhalteten einzigartige Minifiguren für spannende Abenteuer.

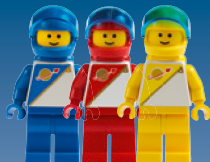

1978-1984

Die Einführung der Astronauten-Minifigur war eine bahnbrechende Entwicklung. Ursprünglich gab es Astronauten nur in roten und weißen Raumanzügen, schnell folgten jedoch auch Minifiguren in Blau, Gelb und Schwarz.

1987

Das Design des Raumanzugs wurde überarbeitet. Ein Reißverschluss lief von der Hüfte schräg zur Schulter hinauf. Der neu entworfene Helm hatte ein durchsichtig-blaues Visier.

1993

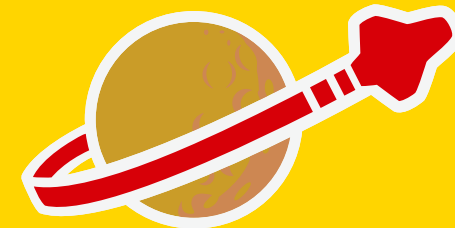

Die Weltraum-Unterthemenwelt „Ice Planet“ aus den 1990er-Jahren hatte ein alternatives Logo mit halbseitig eisbedecktem Planeten.

2009

Diese einzigartige „Astronautenstatue“ war nur in einem einzigen Set aus der Unterthemenwelt „Space Police“ enthalten.

Alle Modelle und Figuren aus der ursprünglichen Themenwelt „Classic Space“ tragen das mittlerweile legendäre LEGO® Weltraum-Logo, auf dem ein rotes Raumschiff einen Mond umkreist.

2014

Benny, der wohl berühmteste LEGO Astronaut aus *The LEGO Movie*, hatte ein abgenutztes Weltraum-Logo und Risse im Helm.

2014

Im LEGO Ideas Set „Exo Suit“ (21109) war ein Astronaut in grünem Raumanzug enthalten.

2019

Zusammen mit Kenny und Benny schloss sich Lenny, der erste rosafarbene Astronaut, in *The LEGO Movie 2* Bennys Weltraum-Team an.

2020

Dem Buch *LEGO Minifigure: A Visual History* lag ein exklusiver oranger Astronaut bei.

2021

Die Minifiguren Serie 21 beinhaltete auch einen Weltraumpolizisten mit Futuron-Oberkörper und klassischem Weltraum-Logo auf der Rüstung.

2022

Die Astronauten aus diesem überarbeiteten Entdeckerraumschiff sind nahezu identische Kopien der Originalfiguren aus dem Set „Galaxy Explorer“ von 1979.

„SEIT ICH 2012 MEINE ERSTEN LEGO®  
MODELLE ENTWURF, HABE ICH DAVON  
GETRÄUMT, EINE ÜBERARBEITETE VERSION  
DER GALAXY EXPLORER ZU ERSCHAFFEN.“

MICHAEL PSIAKI

Michael hat auch zwei kleinere Raumschiffe entworfen, die man mit den Steinen aus diesem Set bauen kann. Diesen Raumschiffen dienen die Sets 924 und 918 als Vorbild. Die Bauanleitungen für diese alternativen Modelle findest du auf: [LEGO.com/buildinginstructions](https://LEGO.com/buildinginstructions)

*Der Designer konnte es sich nicht verkneifen, noch ein weiteres persönliches Detail in dem Modell unterzubringen. Der kleine Roboter war im Originalset nicht enthalten. Er kam erst 1987 mit dem Set 6809 heraus.*

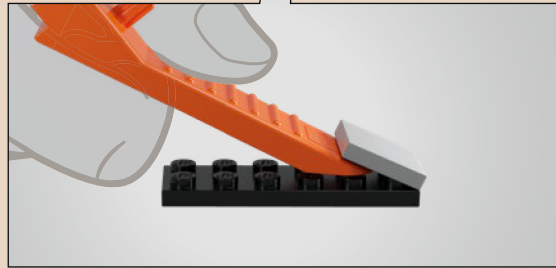

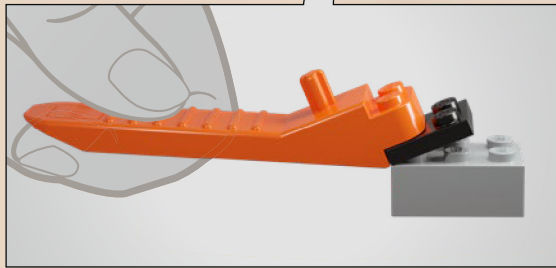

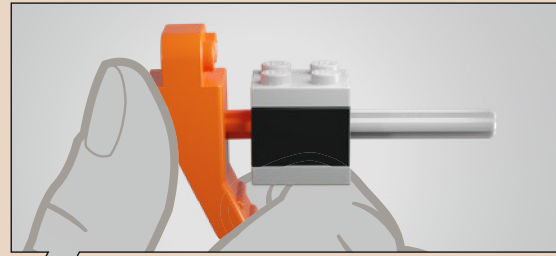

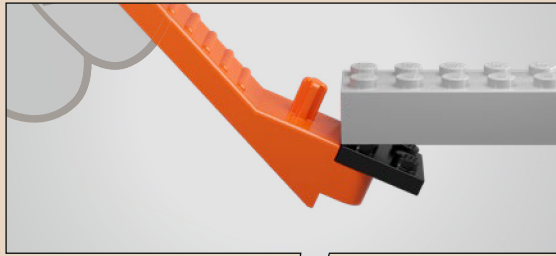

## ANMERKUNGEN DES DESIGNTREAMS

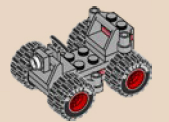

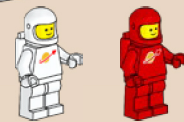

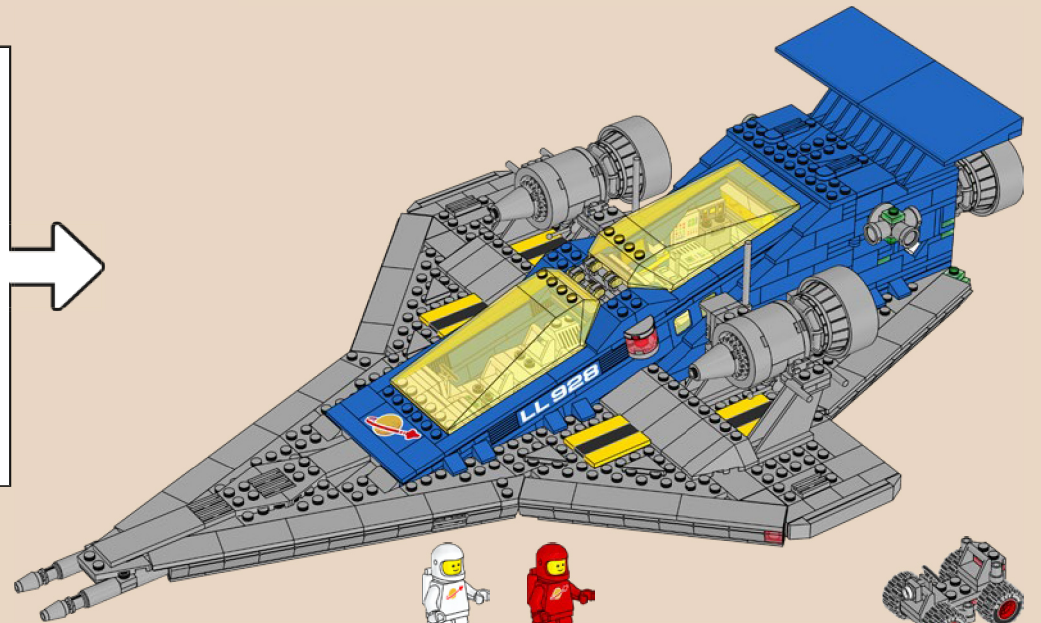

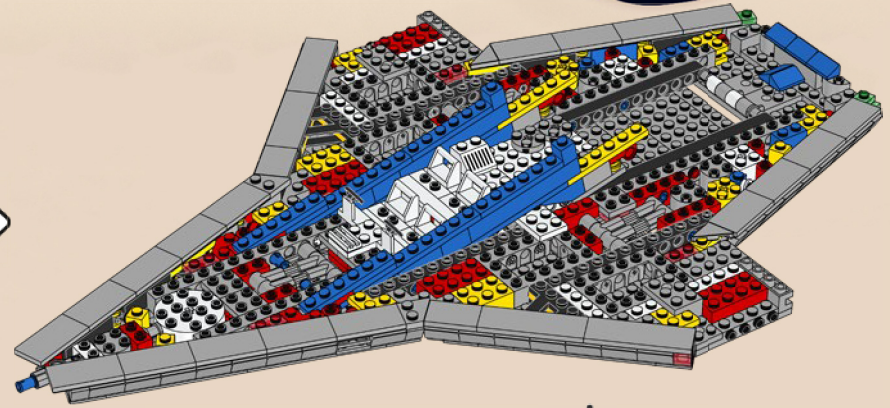

Bereits recht früh in meiner Karriere als LEGO® Designer, etwa im Winter 2013, begann ich damit, an einer aktualisierten Version dieses Sets zu arbeiten. Das Raumschiff hat mittlerweile viele Entwicklungsschritte durchlaufen. Ursprünglich baute ich Versionen, die viel weiter vom Originalmodell abwichen. Doch je weiter wir das Modell verfeinerten, desto enger hielten wir uns ans Originaldesign – mit einigen coolen Upgrades. Eine der wichtigsten Entscheidungen bestand darin, das Modell eineinhalb Mal größer zu bauen als das Original. Wir wollten den Eindruck erwecken, dass das

Entdeckerraumschiff jetzt erwachsen ist, genau wie die Fans des Originalsets. Und weil das Raumschiff jetzt größer ist, konnten wir alle 4 Astronauten ins Cockpit setzen, nicht nur einen. Außerdem haben wir eine Luftschleuse zwischen dem Quartier der Crew und dem Rover-Laderaum eingefügt, damit die Astronauten geschützt sind, wenn sich die Hecktüren öffnen. Durch das einklappbare Fahrwerk erhält das Raumschiff ein viel schnittigeres Profil für seine Weltraumflüge.

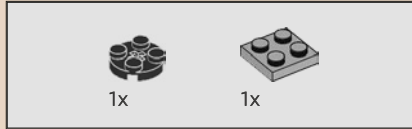

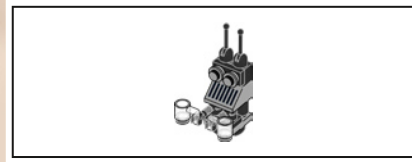

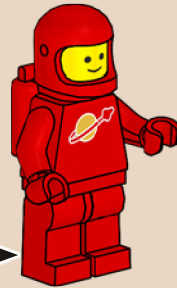

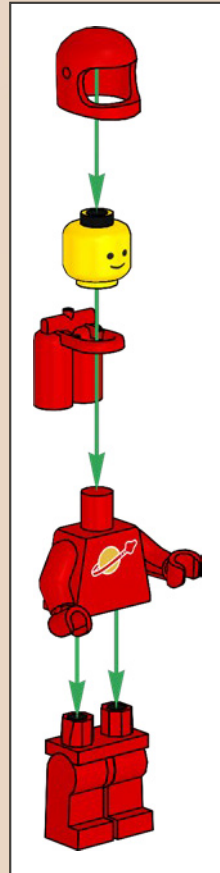

**Michael Psiaki, LEGO® Design Master**

Die roten und grünen Navigationsleuchten am Originalmodell befanden sich nicht an den sonst üblichen Stellen (rote Leuchten an Backbord, grüne Leuchten an Steuerbord). Stattdessen waren die roten Leuchten vorne platziert, die grünen Leuchten am Heck. Bei diesem neuen Modell haben wir das so beibehalten.
